WSIS Forum 2011: Open Consultations on Thematic Aspects and New Innovative Format

Review Meeting: Sessions of the Partnership on Measuring ICT for Development

There are plans to organize two sessions focusing on measuring ICT. The first will tentatively focus on the achievements made since the last WSIS Forum (such as e-government and WSIS target indicators), current areas that the Partnership is working on (such as impact indicators) and areas that need attention. Stakeholders are encouraged to send suggestions for topics of interest related to measuring of ICT. The second session will be organized in collaboration with ORBICOM and will be devoted to a presentation and discussion of the results of a project related to “Statistical Compilation of the ICT Sector and Policy Analysis” covering five developing countries and based on the Partnership core indicators on the ICT sector.
